Good morning, David and Yen:

I am part of the team that supports the Perinatal Health Initiative, which you participated in last year on an issue related to stocking MOUD. Our team also supports the [Attorney General's Substance Use Response Working Group \(SURG\)](#). The SURG comprises three subcommittees and yesterday the Response subcommittee met to finalize recommendations that will be presented to the larger SURG in October. Dr. Stephanie Woodard, a member of the subcommittee, recommended I reach out to you to check if the language in the recommendation pasted below is accurate or how it might be made more clear.

- Revise penalties based on the quantity of Fentanyl, analogs, or other synthetic drugs of high potency that are trafficked. (NRS 453.3385, NRS 453.336, 453.339, 453.3395)

The original recommendation only included Fentanyl but the subcommittee would like to make this inclusive of other synthetic opiates that might be in circulation in the future, without unintentionally including too broad an array of drugs. The recommendations will be included in a report to DHHS that is due in January. The purpose of the SURG and the report is to develop recommendations that improve the state's response to substance use. These recommendations may encompass new legislation or policy changes, which will be determined by the legislature and appropriate divisions within DHHS (i.e., they are not binding). I've copied the subcommittee chair, Dr. Terry Kerns, on this email as well. If you would like to discuss this further, please let us know.

Thank you for your assistance.

Crystal,

Thank you for reaching out to us regarding this potential Bill. As we discussed, your group contains the correct policy experts to assist the legislature in addressing the fentanyl problem and the Board is happy to assist in any way we can.

From the Board's perspective, we attempt to align with DEA Regulations in most cases to decrease confusion. Fentanyl and its analogs are both a Schedule I (no medical use) and Schedule II (medical use and high potential for abuse). FDA approved, commercially produced products are schedule II and illicitly produced products are schedule I. I have listed the current scheduling below.

The language we generally use to describe the drug to make sure we catch all of the products in the class is: **any of the following opiates, including, without limitation, their isomers, esters, ethers, salts and salts of isomers, esters and ethers along with synthetic substances, derivatives and their isomers with similar chemical structure and pharmacological activity such as the following.**

This designation has held up in court time and time again. I have seen cases where boarder language can have an issue in court. The goal is to make the description broad enough to include new illicit products when the criminals change the structure but not too broad to block new treatments.

As you can see below, Schedule I contains 12 different analogs. Schedule II contains 5 different drugs. These products possess different potencies, so you may want to consider that is making your trafficking weight decision.

With all of the said, I think you are on the right path. You may consider using the isomer language with a reference back to NAC 453.510. Doing it this way will allow the law to "keep up with the times" as the Board and the DEA add or remove products from the schedule I list.
